

Background information on new Livinguard masks distributed by Temasek Foundation and BATU

Temasek Foundation has been working with various laboratories and mask vendors to continuously look out for good, effective, and affordable masks for the community.

These masks require only weekly instead of daily washing, and could last for 30 weeks' worth of wash or about 7 months of sustained usage. Given the properties of this mask, Temasek is focusing on the parts of our community most at need first. This includes the built sector where the prevalence of cases exists, our essential workers, and frontliners. This mask is also environmentally friendly as it minimises waste.

Temasek has partnered the built sector in its journey to restart work, and now – sustaining the restart. They are now partnering with SCAL and BATU to reach out to members and those in the built environment to collect these masks from their points of collection at various warehouses!
